

FORMS-WRITE™/Arrow

Data Manager Software

The FORMS-WRITE/Arrow Data Manager is a software package for the automation of forms and databases used on the LINUS Write-Top. With this powerful combination of hardware and software, the tasks of data collection and data entry can be performed at the same time, by the same person, with one machine - the LINUS Write-Top.

The LINUS Write-Top is a computer that recognizes hand written symbols and converts it into data. FORMS-WRITE/Arrow is a software package that manages this handwritten data.

To the user, collecting/entering data can be as simple as filling out a paper form. Just touch a blank on the form and a window appears, offering an area to write on or a group of options from which to choose.

1a. CASE	b. TYPE	c. SEQ	2. CASE	LASTNAME
3. INITIAL DATE	Smith			
7. INSTI	[MATCH]	[RE-FORM]	[ENTER]	[GLOSSARY]
8. ENVIR				
9. INTERPRETERS NEEDED -				

[Do Math] [Recall Edit Chk] [Clear Form] [Exit Form] [Calculator] [Editor Help]
[Break] Record:[Save] [Recall] [Next] [Prev] [Delete] Field: [Dup] [Tab]

Touch a field to open a window for entering handwritten data. Touch [MATCH] and [ENTER] to enter the information into the database.

For the forms designer/database manager, custom applications for the LINUS Write-Top are easy and quick to implement. Knowledge of programming languages is not required. Designers experienced with word processing or database software can start to generate applications in just a couple of hours.

FORMS-WRITE/Arrow provides all of the features you will need to simultaneously collect and enter data in the field:

- Input screens (Automated forms).
- Database management.
- LINUS Write-Top to host data transfer.
- Full math functions.
- Error checking.
- Data formatting.
- Glossary access.
- Pop-up help system.
- Character pad input.
- DOS, Xenix and UNIX compatible.
- "Touch list" selections.
- Custom designed touch buttons.
- Plus much more

FORMS-WRITE/Arrow Data Management Software

This software package is required to execute application programs on the LINUS Write-Top that were developed with the Arrow Application Development Software.

FORMS-WRITE/Arrow Data Manager Software provides windows for data entry on the LINUS Write-Top. The word processing capabilities needed to generate custom applications is provided by the Arrow Application Development Package.

Arrow Application Development Software

This is a keyboard-based software package for the development of applications to be used on the LINUS Write-Top.

DATABASE FUNCTIONS	
1a. CASE	b. TYP
3. INITIAL OPEN DATE	
7. INSTITUTIONAL	
8. ENVIRONMENT	
9. INTERPRETERS	

Move cursor to next field on form. Save a record. Recall a record and LOCK. Read previous record and LOCK. Search for record, no LOCK. Lock record with update LOCK. RECALL next record, no LOCK. Recall previous record, no LOCK. Delete current record. Show editor pop up help. Use last record's field data here. Report number of records in DB	port 'S NAME INVESTIGATION TIME
---	---

HELP: Highlight function, then "Do it". To get out use Break. [Break] [Search] [Search Again] [Left] [Right]

Pop-up Help windows assist the end user as well as the form designer. The FORMS-WRITE/Arrow Help screens are context sensitive, so you see only the subjects you need for a particular mode.

The Arrow Application Development Software runs on a Desk-Top PC and its database files are completely compatible with FORMS-WRITE/Arrow. Consequently, data can be easily transferred between the LINUS Write-Top and a Desk-Top PC without a conversion process.

A UNIX version of the Arrow Software Package is available for integrating the LINUS Write-Top into UNIX environments.

Ordering Information
