### Problem

There is a problem which may occur on a three disk system, when the maximum number of vendors are assigned. A "Disk Full" condition can result on Drive 1 if certain combinations in the index exist. This has not been reported, but it is a potential problem.

### Solution

The problem is corrected by following the steps listed below.

1. Backup the diskette(s) and make the changes on the Backup copy of the program.
2. In BASIC load the program by typing LOAD"APSORT".
3. Make the following corrections:
