Problem

Once NEW has been executed to re-initialize the ARS Series I Program, then System Initialization must be executed. It is mandatory that once you have completed running NEW that you re-initialize.

Solution

System Initialization is selection #10 at the Main Menu. Upon choosing System Initialization you must execute STEP 1 (set the system parameters) and STEP 3 (create a new, empty data file) at the System Initialization Menu. STEP 2 (assigning GL Codes) is optional at this time; however, it would be best to run STEP A for all of the above. Common Errors indicating that the system has not been initialized are: Error #5 in line 60730, Error #1 in line 378, or Error #2 when trying to enter a new name or account.
